

Borough Forestry Performance Dashboard

Goals, Draft Specifications, and Mock-Up

Parks

Target Audience

- **Primary** -- Borough managers (Directors and Deputy Directors); M&O (Chiefs and DCs)
- **Secondary** – FHNR (Central Forestry managers and GIS & Analytics team)
- **Tertiary** – FDC and COO

Business and Technical Owners

There are seven primary business owners:

- 5 Borough Forestry divisions (operations)
- COO/FDC (accountability)
- FHNR Central Forestry (technical support, analyses and policy)

There is one primary technical owner:

- FHNR GIS & Analytics Team

Pain Points

Pain points this tool is meant to address:

- Deputy Chiefs and Chiefs are supposed to manage borough forestry operations but do not have reports that show them what metrics are important
- Hard for borough managers to pull summary data for their boroughs out of ForMS (data pulls are manual, ad-hoc, and not standard)
- Current automated reports are high level, citywide, with borough summary statistics only
- Current dashboards exist for deployment and QA but not borough-based performance and other analytics

Goals

- Highlight the most important metrics to help managers to understand and measure forestry performance
- Identify specific trends to better understand the **who**, **what** and **where** (street or park) of the forestry workflow in their borough
- Provide In-depth borough-level metrics that summarize, analyze, contextualize and communicate the characteristics of the three stages of the forestry workflow: requests, inspections and work orders
- Identify trends to help managers and supervisors intervene to mitigate current or potential problems, including inspection and work unit productivity

Objectives

- Meet the agency's MMR goals
- Track identified risk from source to completion
- Show street vs. park tree workflows and metrics, including by source (Amps, DIA)
- Better understand the characteristics of the work order backlog, and time and resources spent on tasks and activities
- Define and establish productivity benchmarks
- Help managers and supervisors ask, investigate and answer the **why** questions:
 - *why is so much work coming from a particular source?*
 - *why is there so much high risk work emerging from a particular type of request?*
 - *why is the yield for some request types so much higher than others?*
 - *why did we have so many duplicates this week?*
 - *why is our work completed so much lower this week than last?*
 - *Why are certain tree work orders so much older than others? etc*

Dashboard Components

Six Sections:

1. Key Performance Indicators (KPIs)
 2. Requests
 3. Inspections Completed
 4. Work Order Yields
 5. Work Orders Completed
 6. Work Orders Pending
- Inspections
- Work Orders

Timeframe:

- Can select for any period of time (default would be week)

Data Source:

- ForMS

Future Vision

Integrate Additional Data Sources:

- Non-forestry work (flags, holiday trees, lights, materials or equipment handling and delivery, etc) – *this may be possible with standardized use of a the ‘commitment’ field in ForMS*
- Crew sheet data (for mobilization timeframes)
- Vehicle use data summaries
- OT – by week, type of activity, location, crew
